

## Chapter 11

### Area of Quadrilateral

---

#### 11.1 Quadrilateral

A plane figure bounded by four sides is known as a quadrilateral. The straight line joining the opposite corners is called its diagonal. The diagonal divides the quadrilateral into two triangles.

#### Types of Quadrilateral

The following types of quadrilateral are

- |             |               |                          |
|-------------|---------------|--------------------------|
| (1) Square  | (2) Rectangle | (3) Parallelogram        |
| (4) Rhombus | (5) Trapezoid | (6) Cyclic quadrilateral |

#### 11.2 Area of Quadrilateral

##### 1. Square

A square is a plane figure of four sides in which all sides are equal, the opposite sides are parallel and diagonals are also equal. The angle between the adjacent sides is a right angle.

Let ABCD be a square whose each side has length equal to 'a' and AC is a diagonal which divides the square ABCD into equal right triangles, named  $\triangle ABC$  &  $\triangle ACD$ . Therefore,

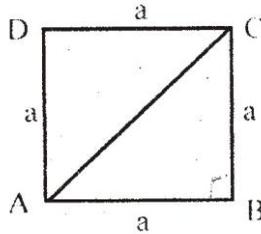

Fig. 11.1

Area of the square ABCD = Area of  $\triangle ABC$  + Area of  $\triangle ACD$

$$\begin{aligned}
 &= \frac{1}{2}(AB)(BC) + \frac{1}{2}(AD)(DC) = \frac{1}{2}(a)(a) + \frac{1}{2}(a)(a) \\
 &= \frac{1}{2}a^2 + \frac{1}{2}a^2 = a^2
 \end{aligned}$$

**Area of square = (Side)<sup>2</sup>**

Length of square =  $\sqrt{\text{Area of square}}$

i.e. side =  $\sqrt{\text{Area}}$

Perimeter of square = 4a

#### Example 1:

A square lawn whose area is 2.5 sq. km has to be enclosed within iron railing. Find the length of the railing and its cost at Rs 10.50 per meter.

**Solution:**

Given that

$$\begin{aligned} \text{Area of square lawn} &= 2.5 \text{ sq. km} \\ &= 2.5 \times (1000)^2 \text{ sq. m} \end{aligned}$$

$$A = 2500000 \text{ sq. m}$$

$$\text{One side of lawn} = \sqrt{2500000} = 1581\text{m}$$

$$\text{Perimeter of square lawn} = 4 \times 1581 = 6324\text{m}$$

$$\text{Cost for 1meter} = 10.50 \text{ rupees}$$

$$\text{Cost for 6324 meters} = 10.50 \times 6324 = 66402 \text{ rupees}$$

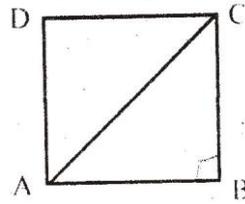

Fig. 11.2

**Example 2:**

The diagonal of a square plate is 19 cm. Find the length of the plate and its area.

**Solution:**

Let ABC be a square plate.

$$\text{Diagonal} = AC = 19\text{cm}$$

Let a = length of square plate in right  $\Delta ABC$

$$(AB)^2 + (BC)^2 = (AC)^2 \Rightarrow a^2 + a^2 = (19)^2 \Rightarrow 2a^2 = 361$$

$$a^2 = 180.5 \Rightarrow a = 13.43 \text{ cm}$$

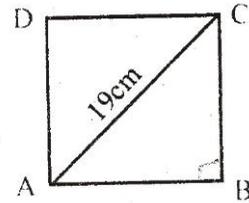

Fig. 11.3

**2. Rectangle**

A rectangle is a four sided figure whose opposite sides are parallel and equal in length, diagonals are equal and angles between adjacent sides are right angles.

Also diagonals of rectangle bisect each other

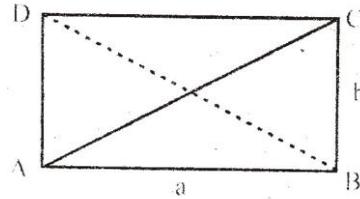

Fig. 11.4

Let ABCD be rectangle having side AB = a

and BC = b and the diagonal AC divides the rectangle into two right triangles.  $\Delta ABC$  and  $\Delta ADC$ .

$$\text{Area of rectangle ABCD} = \text{Area of } \Delta ABC + \text{Area of } \Delta ADC.$$

$$= \frac{1}{2}(AB)(BC) + \frac{1}{2}(DC)(AD) = \frac{1}{2}ab + \frac{1}{2}ab$$

$$\text{Area of rectangle ABCD} = ab$$

$$\therefore \text{Area} = \text{length} \times \text{width}$$

$$\text{Note: Length} = \frac{\text{Area}}{\text{Width}} \quad \text{Width} = \frac{\text{Area}}{\text{length}}$$

$$\text{Perimeter of rectangle ABCD} = AB + BC + CD + AD$$

$$= 2a + 2b = 2(a + b)$$

$$\text{Perimeter} = 2 (\text{length} + \text{breadth})$$

**Example 3:**

The area of a rectangle is 20 sq. cm and one of its sides is 4cm long. Find the breadth and the perimeter of the rectangle.

**Solution:** Given that

Area of rectangle = 20 sq. cm

One of its side i.e. length = 4cm

$\therefore$  Breadth of rectangle = ?

Since area = length x breadth

$20 = 4 \times \text{breadth}$

Also perimeter of rectangle =  $2(\text{length} + \text{breadth})$   
 $= 2(4 + 5) = 18\text{cm}$

**Example 4:**

A rectangle field is 13m long and 10 m wide it has a cement path 3.5m wide around it. What is the area of the cement path?

**Solution:**

Given that

Width of cement path = 3.5cm

Length and width of rectangular field are 13m & 10m respectively.

Therefore

Area of field =  $(13 \times 10)\text{m}^2 = 130\text{m}^2$

Length of outer rectangle =  $13 + 3.5 + 3.5 = 20\text{m}$

& width of outer rectangle =  $10 + 3.5 + 3.5 = 17\text{m}$

$\therefore$  Area of outer rectangle =  $(20 \times 17)\text{m}^2 = 340\text{m}^2$

Hence, Area of cement path = Area of outer rectangular – Area of inner rectangular field

$= 340\text{m}^2 - 130\text{m}^2 = 210\text{m}^2$

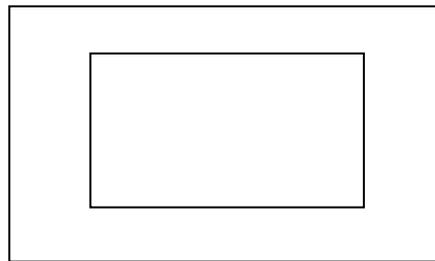

Fig.11.5

### 3. Parallelogram

A parallelogram is a quadrilateral whose opposite sides are equal in length and parallel, however, its diagonals are unequal and bisect each other.

#### Area of Parallelogram

Area of a parallelogram can be calculated in two ways

(i) **When the base and height are given**

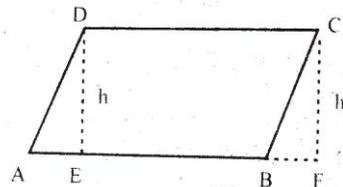

Fig. 11.6

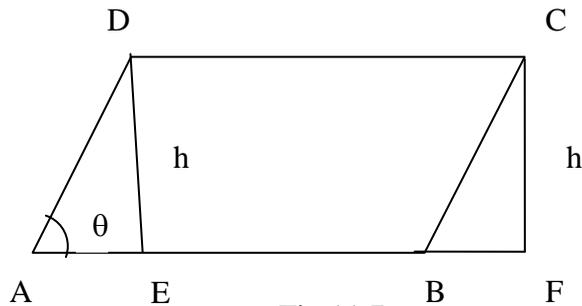

Let ABCD be a parallelogram whose base  $AB=a$  and Height  $DE=h$ .  
 $\therefore$  Area of parallelogram ABCD  
 = Area of rectangle DEFC  
 = (Length)(breadth) = (EF)(DE)  
 = (DC)(DE)  $\therefore EF = CD$   
 = (AB)(DE) &  $CD = AB$   
 =  $a h$

Area of parallelogram = (Base)(height)

**(ii) When the two adjacent sides and included angle given**

Let ABC be the parallelogram with  $AB = b$ ,  $AD = c$

As adjacent sides are  $b$ ,  $c$  and  $\theta$  be the include angle. Draw  $DE \perp r$  on AB from vertex D.

Fig,11.7

Thus  $\triangle AED$  becomes a right triangle.

$$\text{Area of parallelogram ABCD} = (AB)(DE) \text{ ----- (1)}$$

$$\text{In right } \triangle AED, \sin \theta = \frac{DE}{AD} \quad \Rightarrow DE = AD \sin \theta$$

$$DE = c \sin \theta$$

From (1)

$\therefore$  Area of ||gm (parallelogram) ABCD =  $bc \sin \theta$

Area of ||gm (product of adjacent sides)  $\sin \theta$

**Example 5:**

Find the area of a parallelogram whose base is 24cm and height 13 cm respectively.

**Solution:**

Here,  $b = 24\text{cm}$ ,  $h = 13 \text{ cm}$

Area parallelogram =  $b \times h = 24 \times 13 = 312 \text{ sq. cm}$

**Example 6:**

Find the area of a parallelogram whose two adjacent sides of which are 70 cm and 80cm and their included angle  $60^\circ$ .

**Solution:**

Here,  $b = 80$ ,  $c = 70$ ,  $\theta = 60^\circ$

$$\begin{aligned}
 \text{Area} &= bc \sin \theta \\
 &= 80 \times 70 \times \sin 60^\circ \\
 &= 5600 (.866) = 4849 \text{ sq. cm}
 \end{aligned}$$

#### 4. Rhombus

A rhombus is a quadrilateral having all sides equal with unequal diagonal, which bisect each other. If a square is pressed from two opposite corners the rhombus is formed.

##### Area of Rhombus

##### (a) If side $a$ and the included angle $\theta$ is given

Let ABCD be a rhombus and length of each side be 'a' and  $\theta$  be the included angle.

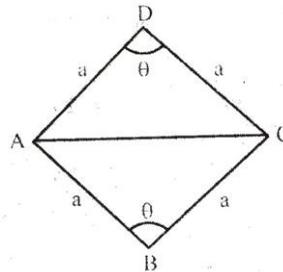

Fig. 11.9

Since diagonal AC divides the rhombus into two equal triangles ABC and ACD.

Therefore

$$\begin{aligned}
 \text{Area of rhombus ABCD} &= 2(\text{area of } \triangle ABC) \\
 &= 2\left(\frac{1}{2} a a \sin \theta\right) = a^2 \sin \theta
 \end{aligned}$$

$$\text{Area} = (\text{one side})^2 \sin \theta$$

**Note :** When diagonal of Rhombus  $d_1$  and  $d_2$  are given the side 'a' can be

calculated as 
$$a = \sqrt{\left(\frac{d_1}{2}\right)^2 + \left(\frac{d_2}{2}\right)^2}$$

##### (b) Area of rhombus, when two diagonals are given

Let  $AC = d_1$  and  $BD = d_2$  be the two diagonals.

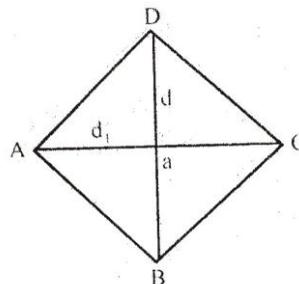

Fig.11.9

Fig. 11.10

Since diagonals of rhombus divide into four equal triangles.

Therefore,

$$\begin{aligned} \text{Area of rhombus} &= 4(\text{area of one triangle}) \\ &= 4\left(\frac{1}{2} \times \frac{AC}{2} \times \frac{BD}{2}\right) \\ &= \frac{AC \times BD}{2} \Rightarrow A = \frac{d_1 \times d_2}{2} \end{aligned}$$

$$\text{Area of rhombus} = \frac{1}{2}(\text{product of two diagonals})$$

**Example 7:**

The length of each side of a rhombus is 120cm and two of its opposite angles are each  $60^\circ$  find the area.

**Solution:**

Here each side  $a = 120\text{cm}$

Angle,  $\theta = 60^\circ$

$$\begin{aligned} \text{Area} &= a \times a \times \sin \theta \\ &= 120 \times 120 \times \sin 60 \\ &= 14400 \times 0.866 \\ &= 12470.4 \text{ sq. cm.} \end{aligned}$$

**Example 8:**

The diagonals of a rhombus are 56 and 33 cm respectively. Find the length of side and the area of the rhombus.

**Solution:**

Let, ABCD is a rhombus with diagonal  $BD = 56\text{cm} = d_1$

$AC = 33\text{cm} = d_2$

Since diagonals of rhombus intersect at right angle triangle

$\therefore$  ABO in right angle triangle

$$\text{Where } OB = \frac{BD}{2} = \frac{56}{2}$$

$$OB = 28$$

$$OA = \frac{AC}{2} = \frac{33}{2} = 16.5$$

$$\therefore |AB|^2 = |AO|^2 + |BO|^2 = (16.5)^2 + (28)^2$$

$$AB = 32.5 \text{ cm}$$

$$\text{Area of Rhombus} = \frac{d_1 \times d_2}{2}$$

$$= \frac{56 \times 33}{2} = 924 \text{ sq. cm}$$

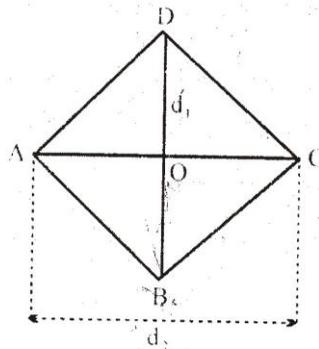

Fig. 11.11

### 5. Trapezoid or Trapezium

A trapezoid is a quadrilateral which has two sides parallel and other two are unparallel. The parallel sides of trapezoid are called base. The altitude is the perpendicular distance between these bases.

Let, ABCD be a trapezoid whose sides AB and CD are parallel, AD and BC and unparallel sides.

Let  $AB = a$ ,  $CD = b$ , and  $DP = h$

$BL = h$ , Since the diagonal BD divide the trapezoid into two triangles ABD & BCD.

Therefore,

$$\begin{aligned} \text{Area of Trapezium} &= \text{Area } \triangle ABD + \text{Area } \triangle BCD \\ &= \frac{1}{2} AB \times DP + \frac{1}{2} \times DC \times BL \\ &= \frac{1}{2} ah + \frac{1}{2} bh \end{aligned}$$

$$A = \frac{1}{2}(a + b)h$$

$$\text{Area of Trapezium} = \frac{\text{Sum of parallel sides}}{2} \times \text{height}$$

#### Example 9:

Find the area of a trapezium whose parallel sides are 57 cm and 85 cm and perpendicular distance between them is 4cm.

#### Solution:

Here,  $a = 85\text{cm}$

$b = 57\text{cm}$

$h = 4\text{cm}$

$$\begin{aligned} \text{Area of Trapezium} &= \frac{a + b}{2} \times h \\ &= \frac{85+57}{2} \times 4 = 142 \times 2 \end{aligned}$$

$$A = 284 \text{ sq. cm}$$

#### Area of any quadrilateral

It may be found as the sum of two triangles formed by joining one of the diagonals of the quadrilateral.

OR

Area of any quadrilateral can be calculated by dividing it into two triangles.

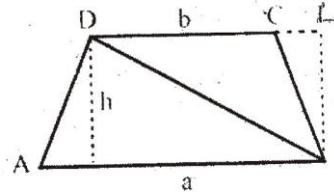

Fig. 11.12

**Example 10:**

Find the area of the quadrilateral ABCD in which the sides AB, BC, CD, DA and diagonal AC are 25, 60, 52, 39 and 65cm. respectively.

**Solution:**

$$\text{Area } \triangle ABC = \sqrt{S(S-a)(S-b)(S-c)}$$

Where,  $2S = a + b + c$

$$2S = 25 + 60 + 65$$

$$S = 75$$

$$\text{Area} = \sqrt{75(75-25)(75-60)(75-65)} = 750 \text{ Sq. cm}$$

$$\text{Area} = \triangle ACD = \sqrt{S(S-a)(S-b)(S-c)}$$

Where,

$$2S = a + b + c$$

$$2S = 52 + 39 + 65$$

$$S = 78$$

$$A = \sqrt{78(78-52)(78-39)(78-65)}$$

$$A = 1014 \text{ Sq. cm}$$

$$\begin{aligned} \text{Area of quadrilateral ABCD} &= \triangle ABC + \triangle ACD \\ &= 750 + 1014 = 1764 \text{ Sq. cm} \end{aligned}$$

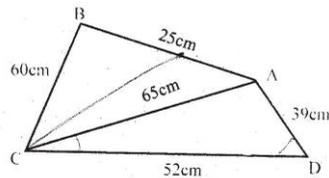

Fig. 11.15

**Area of Cyclic Quadrilateral**

A four sided figure which is in a circle is called a cyclic quadrilateral. Its area is given by the formula.

$$A = \sqrt{(S-a)(S-b)(S-c)(S-d)}$$

Where,

$$2S = a + b + c + d$$

and a, b, c, d are sides

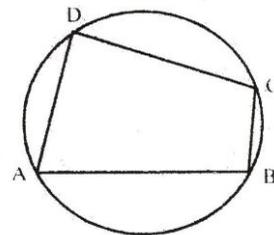

Fig. 11.16

**Example 11:**

In a circular grassy plot a quadrilateral shape with its corners touching the boundary of the plot is to be paved with bricks. Find the area of the pavement in square meter if sides of the quadrilateral are 36, 77, 75, and 40 meter respectively.

**Solution:**

Since this is cyclic quadrilateral, so,  $a = 36$ , m.  $b = 77$ m,  $c = 75$ m,  $d = 40$ m

$$\therefore \text{Area} = \sqrt{(S-a)(S-b)(S-c)(S-d)}$$

Where

$$S = \frac{a + b + c + d}{2} = \frac{36 + 77 + 75 + 40}{2} = 114$$

$$\begin{aligned} \text{Area} &= \sqrt{(114 - 36)(114 - 77)(114 - 75)(114 - 40)} \\ &= \sqrt{78 \times 37 \times 39 \times 74} \\ &= 2886 \text{ Sq. m} \end{aligned}$$

### Exercise 11

- Q1.. A lawn is in the shape of a rectangle of length 60m and width 40m outside the lawn there is a foot path of uniform width 1m, boarding the lawn, Find area of the path.
- Q2. A track round the inside of a rectangular grassy plot 40m by 30m occupies 600 sq. m show that the width of the track is 5m.
- Q3. A wire rectangle is pressed at the corners to form a parallelogram. The included angle is reduced to  $60^\circ$ . Find the reduction in area if the original size of the rectangle is 16 x 12cm.
- Q4. The perimeter of a rhombus is 146cm and one of its diagonal is 55cm. Find the other diagonal and area.
- Q5. The diagonals of a rhombus are 80 cm and 60 cm respectively. Find the area and length of each side.
- Q6. The difference between two parallel sides of a trapezoid is 8 cm. The perpendicular distance between them is 24m and the area of the trapezoid is 312 square meter. Find the two parallel sides.
- Q7. The altitude of a triangle is 15cm and its base is 40cm find the area of trapezoid formed by a line parallel to the base of the triangle and 6cm from the vertex.
- Q8. A swimming pool is in the form of an isosceles trapezoid. The length of its parallel banks are 72m and 45m and the perpendicular distance between them is 60m. Find the area of its water surface. Also find out the number of tiles required to line its bottom of each tile is 1.5m x 1.5m.
- Q9. In a quadrilateral the diagonal is 125cm and the two perpendiculars on it from the other two angles are 19cm and 25cm respectively, find the area.
- Q10. Two triangles are cut from a 14ft. square piece of sheet metal one has a base of 2.5ft. an altitude of 14ft. and the other has a base of 5ft. and an altitude of 7.5ft. Find area of sheet metal left in the piece.

### Answers 11

- |                      |               |                        |

| Q1. 2604 sq.m        | Q3. 26 sq.cm  | Q4. 48 cm; 1320 sq. cm |
| Q5. 2400 sq.cm, 50cm | Q6. 17 m, 9m  | Q7. 252sq.cm           |
| Q8. 3510sq.m,1560    | Q9. 2750sq.cm | Q10. 107.75 sq.ft.     |

### Summary

1. Area of square with side 'a' =  $a^2$  perimeter of square =  $4a$ .  
Length of square =  $\sqrt{\text{area of square}}$
2. Area of rectangle with length a and breadth b is ab.  
Perimeter of rectangle =  $2(a + b)$
3. **(i) Area of parallelogram when base and height are given**  
Area of ||gm = base x height  
**(ii) Area of parallelogram when two adjacent sides and included angle are given**  
If b and c are the adjacent sides and  $\theta$  is the included angle.  
Then  
Area of ||gm (parallelogram) =  $bcsin \theta$   
i.e. Area of ||gm = (Product of adjacent sides)  $\sin \theta$
4. **Area of Rhombus**
  - (i) If side a and the included angle  $\theta$   
Then  
Area of rhombus =  $a^2 \sin \theta$
  - (ii) If  $d_1$  and  $d_2$  are the two diagonals of rhombus  
Then  
Area of rhombus =  $\frac{d_1 \times d_2}{2}$
5. **Area of Trapezoid**  
If a and b are parallel sides and h is the perpendicular distance between these parallel sides.  
Then  
Area of trapezoid =  $\frac{\text{Sum of parallel sides}}{2} \times \text{height}$   
$$\text{Area} = \left(\frac{a + b}{2}\right) \times h$$
6. **Area of any quadrilateral**  
Area of any quadrilateral can be calculated by dividing it into two triangles.  
i.e. if ABCD is any quadrilateral  
Then  
Area of quadrilateral ABCD = Area of  $\triangle ABC$  + Area of  $\triangle ACD$
7. **Area of Cyclic quadrilateral**  
$$A = \sqrt{(S - a)(S - b)(S - c)(S - d)}$$
  
Where  $S = \frac{a + b + c + d}{2}$  and, a, b, c, d sides

### Short Questions

- Q.1:** Define a quadrilateral.
- Q.2:** Write the area and perimeter of a square of sides 'a'.
- Q.3:** If the perimeter of a square is 40 cm. Find the area of the square.
- Q.4:** The area of a rectangle is 20 sq. cm and one of its sides is 4 cm long. Find the breadth and the perimeter of the rectangle.
- Q.5:** A wire rectangle of original size 2 by 3 cm is pressed to form a parallelogram. The included angle is reduced to  $30^\circ$ , find the reduction in area.
- Q.6:** Find the base of a parallelogram whose area is 256 sq. cm. and height 32 cm.
- Q.7:** Define a rhombus.
- Q.8:** Write the area of Rhombus of side 'a' and the included angle ' $\theta$ ' is given and when two diagonals are given.
- Q.9:** The diagonals of a rhombus are 40 m and 30 m. Find its area.
- Q.10:** The perimeter of a Rhombus is 140 cm and one of the opposite angles is  $30^\circ$ , find the area.
- Q.11:** The diagonals of a Rhombus are 6 and 8 cm respectively. Find the length of the side of Rhombus.
- Q.12:** Find the area of Trapezoid whose parallel sides are 20 cm and 30 cm and perpendicular distance between them is 4 cm.
- Q.13:** Define a cyclic quadrilateral and write its area.
- Q.14:** The sides of a cyclic quadrilateral are 75, 55, 140 and 40 m find its area.

### Objective Type Exercise

Q.1 Each questions has four possible answers. Choose the correct answer and encircle it.

- \_\_\_1. Area of a square having side 4cm is equal to  
 (a) 30 sq. cm (b) 16 sq. cm  
 (c) 8 sq. cm (d) 20 sq. cm
- \_\_\_2. Perimeter of square having side 5 cm is  
 (a) 20 cm (b) 10 cm (c) 15cm (d) 25cm
- \_\_\_3. Each angle of a square is  
 (a)  $30^\circ$  (b)  $60^\circ$  (c)  $90^\circ$  (d)  $180^\circ$
- \_\_\_4. Area of rectangle having sides 8 cm and 5 cm is  
 (a) 13 sq. cm (b) 40 sq. cm (c) 45 sq. cm (d) 30 sq. cm
- \_\_\_5. Area of parallelogram having 'a' and b as adjacent sides and  $\theta$  is the included angles is  
 (a)  $ab\cos\theta$  (b)  $\frac{1}{2}ab\sin\theta$   
 (c)  $ab\sin\theta$  (d)  $asin\theta$
- \_\_\_6. Area of parallelogram having base 2cm and height 5cm is  
 (a) 20 sq. cm. (c) 30 sq. cm.  
 (c) 15 sq. cm. (d) 10 sq. cm.
- \_\_\_7. Area of rhombus of side 20 cm and included angle  $30^\circ$  is  
 (a) 100 sq. cm (b) 200 sq. cm.  
 (c) 400 sq. cm (d) 50 sq. cm
- \_\_\_8. If diagonals of rhombus are 6 cm and 5 cm, then area is  
 (a) 15 sq. cm (b) 30 sq. cm  
 (c) 10 sq. cm (d) 11sq. cm
- \_\_\_9. If a = 4cm and b = 8cm are parallel sides and h = 5 cm distance between them, then area of trapezoid is  
 (a) 12 sq. cm (b) 40 sq. cm  
 (c) 30 sq. cm (d) 20 sq. cm
- \_\_\_10. A four sided figure whose two sides are parallel and two sides non-parallel is called  
 (a) Rectangle (b) Parallelogram  
 (c) Trapezium (d) Rhombus
- \_\_\_11. The length of the diagonal of a square of side 'x' is  
 (a)  $\sqrt{2}.x$  sq. unit (b)  $2\sqrt{2x}$  sq. cm  
 (c)  $4\sqrt{2x}$  (d)  $\sqrt{2x}$  sq. cm
- \_\_\_12. The area of a rhombus 24 sq. cm and one diagonal is 6 cm. Then other diagonal will be  
 (a) 8cm (b) 10cm (c) 4cm (d) 36cm

- \_\_13 If perimeter of a square is 40cm, then side of square is  
(a) 4cm (b) 20cm (c) 10cm (d) 5cm

**Answers**

- (1) b (2) a (3) c (4) b  
(5) c (6) d (7) b (8) a  
(9) c (10) c (11) a (12) a  
(13) c
